Register Number:722819106014

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Code:

```python
import random
import time
 while True:
    Temperature=random.randint(0,100)
    Humidity=random.randint(0,100)
    if(Temperature>40):
       print("TEMPERATURE=",Temperature)
       print("HUMIDITY=",Humidity)
       print("!!HIGH TEMPERATURE!!")
       print("ALARM IS ON")
       print('\n')
    else:
print("TEMPERATURE=",Temperature)

print("HUMIDITY=",Humidity)
```

Execution Screenshot:

```
File Edit Format Run Options Window Help
import random
import time
while True:
    Temperature=random.randint(0,100)
    Humidity=random.randint(0,100)
    if(Temperature>40):
        print("TEMPERATURE=",Temperature)
        print("HUMIDITY=",Humidity)
        print("!!HIGH TEMPERATURE!!")
        print("ALARM IS ON")
        print('\n')
    else:
        print("TEMPERATURE=",Temperature)
        print("HUMIDITY=",Humidity)
        print("NORMAL TEMPERATURE",'\n')
    time.sleep(5)
```

```
